Methodology and Sources — DELIVERY130

Population

The first submission's artist list: 131 rows describing 129 artists (one artist is held twice under two provider UUIDs and is merged here).

Revenue

Per artist per quarter, revenue is built from observed audience levels and observed volumes where they exist, and from documented estimates where they do not. Every row states which. Platform revenue is volume x a per-unit rate; the unmeasured-platform uplift is a flat proportion of Spotify revenue for platforms never queried and is carried OUTSIDE the platform breakdown so it cannot be mistaken for measurement.

Constants

Every non-observed constant used anywhere in this package, with its class:

Constant	Value	Class	Meaning
STREAMS_PER_LISTENER_MONTH	3.5	EST	Converts Spotify monthly listeners (reach) into plays (volume).
SPOTIFY_PER_STREAM	0.004	EST	Payout per Spotify stream.
YOUTUBE_PER_VIEW	0.004	EST	Payout per YouTube view.
DEEZER_PER_STREAM	0.004	EST	Payout per Deezer stream.
DEEZER_STREAMS_PER_FAN_MONTH	2.0	EST	Converts Deezer fans into plays.
VIEWS_PER_SUBSCRIBER_MONTH	13.527	EST	Estimates YouTube views where no observed quarter volume exists (all quarters before Q3 2021, quarters whose observations do not span the period, and artists the views series never covers).
COUNTER_RESTATEMENT_FACTOR	50.0	ASM	Above this, a one-interval jump in a cumulative counter is a provider restatement (channel merge or backfill), not consumption, and is repriced at the median rate.
VIEWS_PER_LISTENER_MONTH	12.48	EST	Estimates YouTube views for artists holding a YouTube listener level but no observed view volume and no subscriber level.
MIN_OBSERVED_SPAN_COVERAGE	0.9	ASM	Below this, a cumulative counter's (last - first) delta measures a shorter window than the quarter and is not a valid quarterly volume, so the modelled fallback is used instead.
UNMEASURED_UPLIFT_RATE	0.3	ASM	Uplift for platforms never queried (Apple Music, Amazon, Boomplay, Audiomack and others).
NAIRA_PER_USD	1500	ASM	Fixed conversion for all naira figures.
TRACKS_PER_QUARTER	2	ASM	Multiplier for per-track cost categories.
AVG_PRODUCTION_COST_NGN	750000	ASM	Studio production cost.

Constant	Value	Class	Meaning
AVG_DISTRIBUTION_COST_NGN	15000	ASM	Digital distribution cost.
AVG_PROMOTION_COST_NGN	250000	ASM	Promotion and marketing cost.
AVG_HOSTING_COST_QUARTERLY_NGN	50000	ASM	Web hosting and CDN cost.

EST is an estimate derived from data; ASM is an assumption taken from a source outside this system. Neither is an observation and neither is rendered as one.

Classification vocabulary

Code	Meaning
OBS	Observed directly from a provider endpoint
CNT	Counted from observed records
AGG	Aggregated from observations
EST	Estimated from observed data using a stated rule
ASM	Assumed from a source outside this system
UNK	Not measured. Never rendered as zero
