## Quality Check Report — DELIVERY130

---

Each check states its predicate and what a failure would mean. Checks that cannot fail by construction are not reported as passes.

| # | Check                      | Predicate                             | Result                                                        |
|---|----------------------------|---------------------------------------|---------------------------------------------------------------|
| 1 | One row per artist-quarter | no duplicate (period, artist)         | PASS — 0 duplicates                                           |
| 2 | No negative revenue        | gross >= 0 on every row               | PASS                                                          |
| 3 | Period totals reconcile    | pseudo-row == sum of its quarter      | PASS — all 31 quarters to the cent                            |
| 4 | Artist count               | distinct artists == cohort definition | PASS — 129                                                    |
| 5 | Export blanks are blank    | unmeasured split is empty, never 0    | PASS — 23 of 31 quarters measured; the rest carry empty cells |

### Coverage, stated rather than checked

---

- YouTube volume: 1,876 rows observed, 919 estimated, 1,003 with no YouTube presence.
- Export split: measured in 23 of 31 quarters.
- Q3 2026 is incomplete and is excluded from growth calculations.

### What these checks do not establish

---

They establish internal consistency. They cannot establish that a provider's audience figure is correct, that a per-stream rate matches what a platform actually paid, or that an estimate is close to the truth. Those are limitations of the inputs, and they are documented rather than tested.
